Quantum Physics is scientific irresponsibility that will have dire consequences for humanity.

Up to recent times our linear momentum or evolution was secured by the fact that basic particles held constant in space and time.

Scientists discovered that the smaller the particle the greater the technological possibilities.

They continued to reduce the particle until it became unstable: Its referential position in time and space began shifting of its own accord thus making it untrustworthy as the vehicle for our ongoing momentum.

Thus marking the end of control and the beginning of cooperation.

But, Science is anchored in proof and so the absence of constancy is anathema.

Yet the dancing particle demands cooperation!

A golden opportunity missed as technology crashed on the doorstep of cooperation to be reborn into fragmented complexity (Quantum Physics).

A new day for Science as each fragment is particularized into new avenues of inquiry.

Along follows the associated diseases, but not to worry Science will find a cure.

Science will guide us true.
